

SWOCKY **NEO**

LIGHT AND FLEX

The Swocky NEO system is an advancement of the Swock Smart, distinguished by its lightweight design and flexible adjustment options.

FIELD APPLICATION

The Swocky NEO closure system was developed for demanding applications and is used in various fields. It provides reliable support and stability, especially in helmets for sports activities such as cycling, climbing, and skiing. It is also used in work helmets, where safety and lightweight design are essential.

COMFORT

The flexible head cradle allows the closure system to adapt effortlessly to various head shapes. The height adjustability of the head cradle, especially with the 3-point system, enables precise adjustments for an optimal fit. A special highlight is the dedicated cutout for wearers with bangs, providing additional comfort.

CONSTRUCTION AND COMPATIBILITY

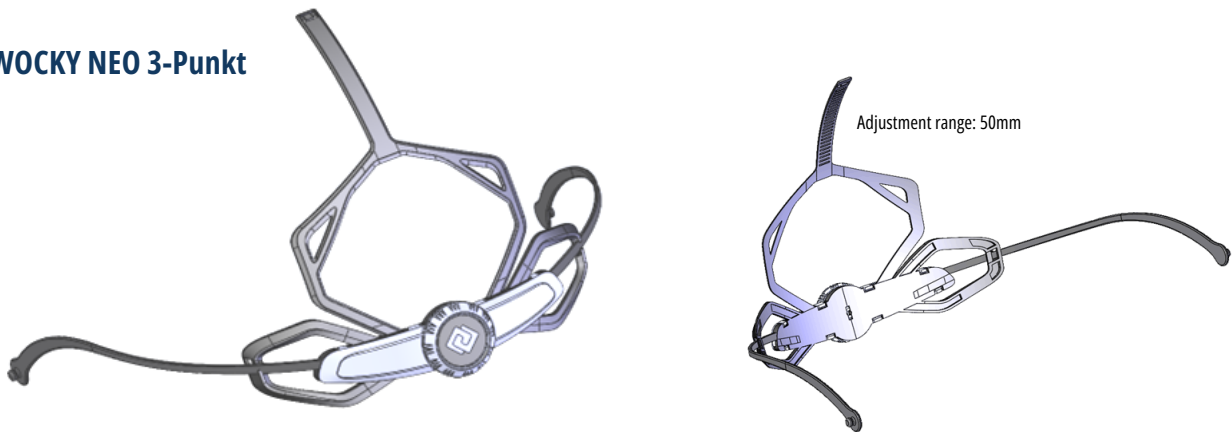

A unique feature of the Swocky NEO is the logo on the adjustment dial, which always remains in the same position. For a customized design, components can be created in various colors, and the logo can be adjusted upon request.

EXECUTIONS AND CONFIGURATION

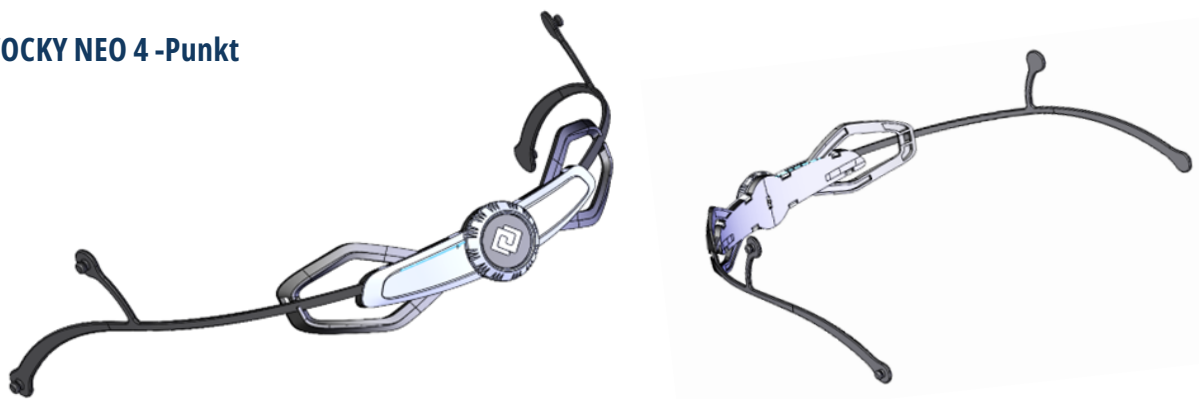

The Swocky NEO is available in two main versions: the 3-point system and the 4-point system. The 3-point system allows flexible height adjustment of the head cradle through the ratchet band adjustment for an optimal fit. The 4-point system offers additional stability with side attachment points, providing a firm and secure fit.

SWOCKY NEO 3-Punkt

The 3-point version clicks into two side anchoring points in the helmet. A ratchet band on the head cradle, connected to an anchor in the EPS, allows for individual height adjustment, enabling the head cradle to adapt optimally to the head shape.

SWOCKY NEO 4 -Punkt

The 4-point version clicks into four side anchoring points in the helmet, holding it in a fixed position. This is an ideal adjustment system for lightweight sports helmets and safety helmets.

Accessory parts

- Anchor mount for 50mm height adjustment
- Double basket for securing the side straps
